THE LIFE OF CHRONIC HEPATITIS B PATIENT

Silvana Lesidrenska, HepActive Association

24 Nov 2021
Can I transmit it if I am undetectable?

HbeAg?

NUCs

Viral load?

Anti-Hbs?

cccDNA?

HbsAg quantitative?

Functional cure?

Fibrosis?

HbeAg?

Anti-Hbe?

Struggle to understand the disease

Lifelong chronic disease

Fear of death

Dealing with health system

Stigma and Discrimination

Medical expenses

There is no CURE

No access to proper care and treatment

Can I transmit it if I am undetectable?

Feels “contagious”

Family and social isolation

Mental and physical exhaustion

Fibrosis?

Family and social isolation

Stigma and Discrimination

Medical expenses

There is no CURE

No access to proper care and treatment

Can I transmit it if I am undetectable?

Feels “contagious”

Family and social isolation

Mental and physical exhaustion

There is no CURE

No access to proper care and treatment

Can I transmit it if I am undetectable?
THE MIND OF A CHRONIC HEPATITIS B PATIENT

WHEN HEARS “CLINICAL TRIAL”
Thank you!
Thank you!
Thank you!
Thank you!
What if I die? Is it safe? What is the benefit for me? What does it mean “functional cure”? What if there are long-term consequences? Why a clinical trial is needed for?
Our perspective

- Easy-to-understand information about the purpose of the trial
- Explanation of the main terms (functional cure, cccDNA...)
- What if unexpected side effects occur?
- Guaranteed privacy
- Treatment easy to take/store
- Finite with no/limited side effects
- Affordable (when on market)
