

HBV Care in RLS Relaunched!

Are you working on HBV in resource-limited-settings? Then we'd love to hear your thoughts!

Now in Spanish, French, and English

Submit by July 1!

ICE-HBV is working on an international collaborative research review project about HBV management in resource-limited settings (RLS), led by Daryl Lau and Manal El Sayed. The main objective of the project is to **improve access to/quality of HBV care in RLS** and reduce HBV mortality and incidence.

We are therefore inviting individuals and organizations working on HBV in resource-limited settings to **complete a survey developed to elaborate improved Point-of-Care models for HBV management in RLS**. Your input will inform our work on this pressing topic. The survey should take **around 15-20 minutes** and can be found in the link or QR codes below:

[Survey - English](#)

[Sondage - Français](#)

[Encuesta - Español](#)

If you have any questions or issues with the survey, feel free to contact ICE-HBV Program Associate Jennifer Pampolina at jpampolina@excolo.com.sg

Feel free to forward this message to colleagues and organizations that also work on HBV in RLS.

Thank you in advance for your help and important contribution to this project.
